The ideal candidate is a flexible, creative engineer who has deep expertise, energetic curiosity, a solid grasp of design, and a desire to wear many hats. This person will join a multidisciplinary team dedicated to providing problem solving support and solutions in a vast variety of industries and technologies we serve.

Objectives of this role:

- Support distributor partners and customers as needed for technical support on all products
- Field service as required to support distributor partners and our customers
- Manage multiple projects timelines as required to support the business

Responsibilities:

- Work directly with partners and customers to understand requirements, and data flows to articulate solutions, risks, and predict potential challenges
- Review submitted designs for errors, interferences and other design conflicts
- Design solutions to meet the customers' needs using the MayCAD design tool
- Demonstrate and explain best practices in design and assembly of MayTec products
- Prepare and issue written quotes for customers

Skills/Qualifications:

- Bachelor's degree or equivalent in robotics, computer science, or electrical engineering
- Hands-on experience with implementation of robot and PLC software
- Broad technical and IT knowledge, including operating systems, programming languages, and databases
- Good understanding how to write, test, troubleshoot, efficient code
- Programming and troubleshooting experience with PLC controls for I/O systems
- Ability to develop training to partners and customers as required
- Excellent communication, interpersonal, and project management and technical skills
- Strong project management skills with attention to detail, and problem-solving
- Proficiency in Microsoft Office Applications
